We can create a smile that's perfect for you!

Long Lasting Life-Like Esthetics

Not all denture teeth are created equally. Ivoclar Vivadent Removable dentures offer the most life-like options available and are crafted using the most advanced material science to ensure an enhanced appearance and dependable wear for years to come.

Smile-Specific Denture Tooth Selection

An Ivoclar Vivadent Removable Denture is designed to provide you with a true-to-nature smile based on your individual facial characteristics and personality, as well as your preferences. The final result is not just a denture, but a smile that is perfect for you.

Teeth that are right for you.

You may wonder why some dentures look like real teeth while others have the obvious appearance of a denture. This is not by chance, but has to do with three main factors.

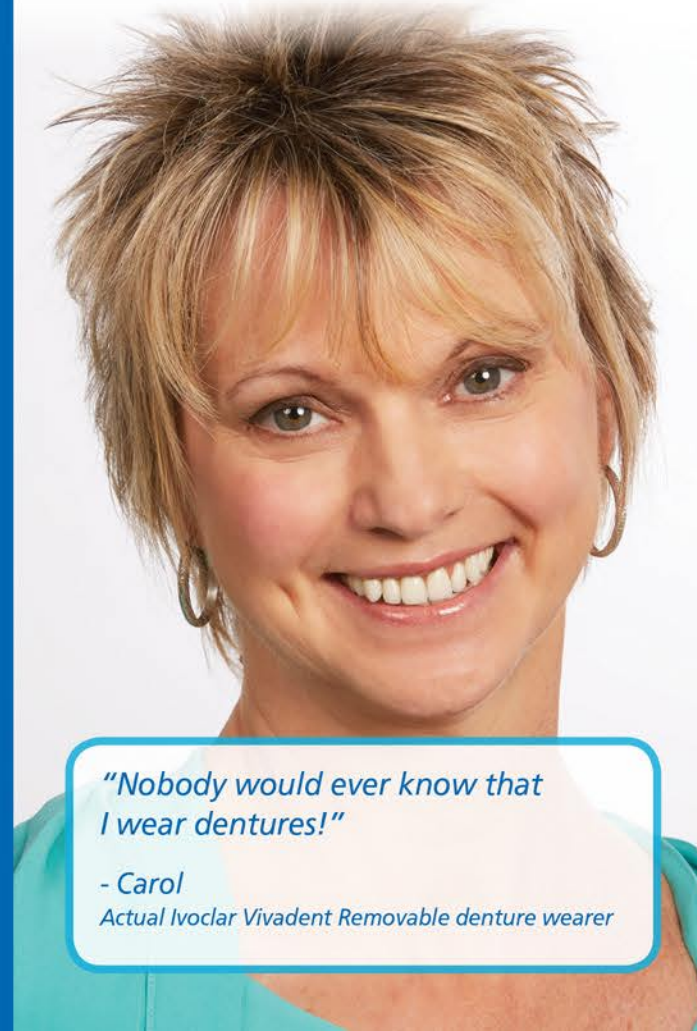

- The shapes of the teeth
- The colors and surface texture of the teeth
- The placement of the teeth

Ivoclar Vivadent denture teeth are designed to look like natural teeth with gender specific tooth shapes and colors that complement the age and personality of the patient.

Depending on your needs, your dental team can choose from a selection of available tooth shapes and a variety of materials, such as highly durable acrylic resin or Nano hybrid composite that resist wear, chipping, cracking, and staining. Advanced layering techniques make Ivoclar Vivadent Removable denture teeth look amazingly life-like by replicating the depth and beauty of natural teeth. In fact, they're made by the same company that manufactures the state-of-the-art dental products and materials that make TV's most amazing smile makeovers possible.

Personalized Smile

The placement of the teeth is also very important to create a natural smile and this is determined by esthetic guidelines taken from your facial features. Your dental professional is committed to using a proven and reliable system in gathering these guidelines and has been trained to use the Ivoclar Vivadent Removable Smile Design Kit™ to create a smile that is personalized just for you.

"Nobody would ever know that I wear dentures!"

- Carol

Better Fit and Function

The science behind a better denture is not just in the denture teeth, but also in the pink tissue or (gum) portion of the denture called the denture base. During conventional processing the acrylic denture base shrinks. This shrinkage can cause warping that leads to sore spots and a loose fitting denture. You can feel insecure when doing everyday things like smiling or eating.

"I'm proud of this smile...and I don't have to worry about them slipping, they fit like a glove!"

- Anna

Patented Injection Press Processing

An Ivoclar Vivadent Removable Denture has the only patented press technique that can ensure a denture base with:

- A Precise Fit
- More Comfort
- Better Stability

Not only will this patented injection press technique produce a denture with a precision fit, more comfort, and better function; but with proper cleaning the dense bubble free acrylic denture base will resist staining and plaque and prevent embarrassing odors from bacteria growth years after delivery.

- Resist Staining and Plaque
- Prevent Bacteria Growth

Your dental team can also choose from a variety of acrylic shades to match your existing gum tissue for a true-to-nature smile.
